English: B1 (Intermediate, CEFR)

Work setup: remote (preferred), hybrid, office; open to relocation and business trips

Technical Project Manager

Experience (1 year 6 months in project and team management; 6 years 4 months in operations; 7 years 1 month total)

03.2025 — 09.2026 | **Project Manager, BCH Labs, remote**

Algorithmic trading bot on the Solana blockchain. Team of up to 5: DevOps, ML engineer, Rust developers. Stack: Rust, ClickHouse, PostgreSQL, Python, Grafana, Notion.

Key projects:

Process and delivery (2025—2026)

The team had to move predictably, and the founder had to see status without assembling it by hand.

- Weekly sprints, Mon–Fri: 5–6 sprint goals, each with 3–15 tasks ranging from 5 minutes to 4 hours
- Moved the process from an epic — feature — task hierarchy to sprint goals with personal daily goals under each
- A goal counted as met by outcome, not by closed tasks: if model training did not deliver the stated PnL gain, the goal failed. Every task ended the day as done or failed
- Rituals: daily call in Google Meet with blocker review and code review, weekly Loom summary and a post in the lab chat; planning and documentation in Notion

Result: about 80% of sprint tasks closed; 119 PRs in 11 months, 92 merged (77%), 195 reviews, median PR cycle 0.7 days — a feedback loop shorter than a working day

Budget and team (2025—2026)

After external funding was cut, the project had to continue within an agreed limit.

- Agreed a development spending limit with the founder and managed the budget myself
- Built a calculator tracking hours per contributor and used it to control project spend
- Team of 3 to 6 people with overlapping roles; I covered testing, development and the team lead role

Result: spend per hour became transparent and development continued within the agreed budget

Hiring and resource planning (2025—2026)

Three roles to close: business assistant, ML engineer, Rust Tech Lead.

- Moved hiring from agencies to an in-house process: our own cycle closed the assistant role in a week and the Rust role in a month
- Designed the funnel (form via Apps Script, 40-minute live coding, take-home task, system design) and a 100-point scorecard with a pass mark of 65 and stop signals
- Rust Tech Lead: 107 applications → 35 live coding sessions → 9 to take-home → 3 to system design → 3 hires, about a month versus a month and a half with no result from two agencies. Business assistant: 23 applications → 7 interviews → 2 paid trial days → hired in a week

Result: all three roles closed; deep technical assessment for Rust handed over to a senior developer while I kept the process and screening — selection quality improved

Risk management through experiments (2025—2026)

Not spending team months on directions with no effect.

- Closed four growth hypotheses quantitatively: selection threshold, stop-loss, entry timing, execution speed; plus an A/B/C/D experiment on execution parameters

Result: every hypothesis was disproved before development was invested in it — the risk of a false direction was removed

11.2023 — 04.2025 | **Business Assistant to the Founder, ETICO.BY, premium renovation studio, Minsk**

Up to 5 premium renovation sites at once, 1–5 workers per site.

- Coordinated parallel sites: deadlines, supplies, people, documents
- Calculated cost estimates and ran payments — ownership of the works budget; hired workers and crews to match scope

09.2016 — 11.2019 · **Assistant to the Head, CT-EXPRESS online school, Minsk** — *operations for the school and its cohorts; the school grew from one subject to three*

Other experience (details in the portfolio): 08.2023 — 04.2025 cartographer-editor at a cartographic enterprise (mandatory placement); 03.2024 — 08.2025 technical assistant for psychology groups; 07.2023 — 11.2023 content and production assistant in an info-business project; 09.2022 — 06.2023 lecturer in cartography at Belarusian State University.

Education

2017 — 2023 | **Belarusian State University, Minsk**

Faculty of Geography and Geoinformatics, Department of Geodesy and Aerospace Cartography

Cartography and geodesy, specialist degree; MSc in Geographical Sciences

Research on population density mapping of Belarus. Chair of the housing committee of the faculty trade union: paperwork, database, student accommodation.

July 2026 | **BELHARD Education Center** — «Data Analyst from Scratch»: SQL and window functions, statistics and A/B tests, Python, BI dashboards

Certificates

July 2026 | Certificate of completion, «Data Analyst from Scratch», BELHARD Education Center

Skills

Delivery: sprint planning, daily stand-ups, sprint reviews, decomposition and prioritisation, deadline control

Metrics and risk: cycle time, review time, throughput, hiring funnel; validating hypotheses by experiment before investing development

Stakeholders: status reporting on deadlines and risk, translating technical detail into decisions

Team: hiring for engineering roles, structured interviews, scorecards, onboarding

Budget: spending limit, per-person hour tracking, project spend control

Tools: Notion, Google Meet, Loom, Git, GitHub, Grafana, Docker; SQL — ClickHouse, PostgreSQL; Python; Rust — basic

Languages: Russian — native; English — B1 (Intermediate)
